Giovanni Battista Belzoni.

I.

BELZONI AT PADUA.

I have no intention of troubling the reader with a biography of Giovanni Battista Belzoni. The birth, the short, eventful life of forty-five years, and the death of the great Italian explorer, have been written and re-written both at home and abroad: his excursions into ancient and classical Egypt are as familiar, if not more so, to the Englishman as to the Italian. My business is with a few details of his career, and especially with his death, concerning which I know more than any man now living. Finally, I would suggest certain honours due to his memory before it fades,—the fate of travellers and explorers amongst their brother men,—into the mists and glooms of the past. As, however, all are not familiar with a career, peculiarly attractive to Englishmen, which began in 1815 and which ended in 1823, the following facts, borrowed more from living authorities than from books, may not be unwelcome.

Belzoni’s mother-city was Padua. A century after he was born I visited what now represents his birthplace, No. 2946 in the Via Paolotti. It stands opposite the gloomy old prison of the same name, a kind of guardhouse, whose occupation is denoted by the sentries and the wooden window-screens. The two-storied, four-windowed tenement, with its yellow walls and green shutters jealously barred in the ground-floor, bears, under the normal Paduan arcade, a small slab of white marble inscribed:

IN QVESTA CASA
IL 5 NOV. 1773 NACQUE
BELZONI.

The building, however, is modern. In the early quarter of our century, the street was a straggle of huts and hovels, and the garden of the present house contained more than one. They were “improved off” about 1845, on the occasion of his leading home a bride, by the present owner, Sig. Squarzina, C.E.

As the explorer tells us in his well-known Travels,* the family was originally Roman, with the rights of citizenship, and the name Bolzon, or Bolzoni, was softened by him to Belzoni. One of many children, he

* Narrations of Operations and Recent Discoveries in Egypt and Nubia, etc., fol. and atlas. London, Murray, 1839.

inherited a splendid physique from his mother, Teresa, of the well-known Orsolo house; she is described as a woman of masculine strength and stature. His father, Jano, was a *tosaore,* —in plain English, a barber,—proud of the old home which he had never seen, and full of legends concerning the grandeur of Rome and his ancestry. Let me say, sans rancune, that there is an important difference (in kind) between a Roman *tosaore* and a northern “barber.” We must not confound old and new civilisations.

The future traveller’s first journey was an escapade which is related at full length by his biographers.* The father had taken his large and lively family for a *gita* to Monte Ortone, near the famous thermes of classical Abano, and the day in the country had been so charming that Giambattista persuaded his younger brother Antonio to repeat the trip without the formality of asking leave. This led to further wanderings— to Ferrara, Bologna, and other places in the direction of Rome; but the two runaways, who were penniless, presently lost heart and returned home. Hence, possibly, the persistent but mistaken report which makes Belzoni’s father a *cultivatore,* or peasant-proprietor, at Abano, and, consequently, a compatriot of Pietro di Abano, the “Concilior of Doctors’ Differences” (A.D. 1250-1316).

Padua, it must be confessed, has by no means neglected her worthy, as is known to every traveller who visits the Palazzo della Ragione. This curious pile, which separates the fruit market and the vegetable market, with their Dahoman umbrellas, is thoroughly out of place. The guide-books tell us that the architectural idea was borrowed from a Hindu palace; I find in it a forecast of the nineteenth century railway station. A mighty roof covers the great hall, Il Salone di Padua, called “of Reason” because courts of law were held here; both have the merit of being as large and as ugly as any in Italy. Inside, over the doorway, stands the great medallion in Carrara marble, two metres in circumference, cut in *alto-relievo,* at Rome, by Rinaldo Rinaldi of Padua, a pupil of Canova. Girt by the serpent of immortality, the head of the turbanned and long-bearded explorer looks towards the dexter chief, and bears the following simple and incorrect legend:

I.B.BELZONIVS. VETER.AEGYPTI (sic) MONUMENT.REPERTOR.

Below stands:

OBIT, AET. ANN. XLV IN AFRICA. REGNO
BENINENSI AN. MDCCCXXXII.

This medallion was set up after the explorer’s death. In 1819, when he revisited his native city, and, despite the *res angusta domi,* presented to her, with the pride of filial piety, two Egyptian statues, his
GIOVANNI BATTISTA BELZONI.

compatriots showed their gratitude by a medal coined in England. It bore round the figures:

OR DONVM PATRIA GRATA
A.M.DCCCXIX.

On the reverse is:

IO. BAPT. BELZONI
PATAVINO
QVI CEPI RENEMI PIRAMIDEM
AUDISQ. SEPULCRVM
PRIMO APERVIT
ET URBE RERNICIS
NVRIAE ET LIBVAE NON
IMPAYIDE DETINIT.

At either side of the entrance which carries the medallion sit the two Egyptian statues alluded to. Both represent Psah, the cat-headed goddess of Bi-Bast, or Bubastis, now Zagazig town. Brugger Bey makes her Isis of the tabby-head, in Arabic Bissat (the cat). Osiris assuming the title of Bas or Biss (the tom-cat). The two hold in the left hand the mystic TAU; one has well-marked whiskers à la Rè Galantumse; consequently, despite the forms, which are distinctly feminine, it has become, in local parlance, the "male mummy." "Pussy," on the right is inscribed:

IO. BAPT. BELZONI. PAT.
EX THEIS AEGYPTIS
DONVM MISIT
A.M.DCCCXIX.
CIVITAS GRATA.

Further to the left of the entrance stands the plaster statue of Belzoni, carrying on its base the artist's name, SENAIO NATALE. It is of heroic size, at least ten feet tall, and habited in a very fancy costume: large falling collar, double buttoned in front, sash round waist, short, long stockings, and "pumps" with fancy arabesques: in Rabelaisian phrase, "pinked and jagged like lobster wadles." The right hand holds a roll of manuscript; the left controls a cloak, or rather a fringed cloth, a curtain, which is, I presume, the picturesque and poetical phase of cloak. This work of art has two merits. It shows the explorer's figure exactly as it never was, and it succeeds in hiding his face from a near view; the rapt regard is so "exexeciort," so heavenwards, that the spectators see only a foreshortened nose based upon a tangled bush of beard. The inscription also has its value: it is long, while it says little; it omits one of the names; and, as a record of exploits, it indulges too freely in the

* In the Gold Mines of Median I derive this word from "Bissah." The cat is a later introduction into Europe, and the very word (Katt, Catus) is probably Semitic.

The first three lines are correct enough, "barzing" the mutilated name. Belzoni, after preparing to become a monk, studied the elements of engineering at Rome, which, on the French occupation (1803), he exchanged for London. "Hercules" probably alludes to the fact, forgotten by his countrymen, that he supported himself by feats of strength at various theatres. He was a magnificent specimen of a man, strong as a Hercules, handsome as an Apollo; the various portraits taken about this time show the fine features which rarely, except in statues, distinguish the professional athlete. He had that "divination," that archaological instinct, which nascitur, non fit: we see it now in MM. Mariette, Cennola, and Schliemann, whose name is Shalmon.

After marrying, and passing nine years in England, Belzoni with his wife drifted to Egypt (June 9, 1815), then happy under the rule of Mohammed Ali the Great. He began, as an "independent member," with setting up a hydraulic machine at the Shubrah Gardens, carrying oris to Athens, coals to Newcastle. He failed, and fell into the ranks. Nile-land was then, as now, a field for plunder; fortunes were made by digging, not gold, but antiquities; and the archaological field became a battle-plain for two armies of Dragomans and Fellah-navvies. One was headed by the redoubtable Salt; the other owned the command of Dro-

* The 1st of January was up the Nile; the 2nd, entered the Second Pyramid and continued till the 3rd up stream; the 4th was to Berehik on the Red Sea, and the 6th to the so-called Oasis of Axmon.
† This orthography, and even Psamttichos, is found; but the of Psammis, or Psammetic, probably bore in this a sign of reduplication (8).
vetti, or Drouetti, the Piedmontese Consul and Collector, whose sharp Italian brain had done much to promote the great Pasha’s interests.

Belzoni, without a regular engagement, cast his lot with the Englishman, and was sent to Thebes. Here he shipped on board a barge and floated down to el-Rashid (Rosetta), the bust of Ramesses II, miscalled “Young Memnon”—(Miamun or Amun-maii). The Colossus reached its long home, the large Hall in the British Museum, without any of the mishaps which have lately attended a certain “Needle.” The explorer then travelled, via Alexandria, Cairo, and Edfu, to the Isles of Elephantine and Philae, both, by-the-by, meaning Elephant (Arabic al-Fil), despite Wilkinson. The enemy attacked him as he was removing his obelisk from Philae; it consisted of an “Arab” mob, numbering some thirty, under the command of two Italians—Lebucco and the “renegade Rossignano,” with Drouetti in the rear. Belzoni defended himself in a characteristic way, by knocking down an assailant, seizing his ankles, and using him as a club upon the foemen’s heads. This novel weapon, in the Samson style, gained a ready victory. He reached Wady Halfah (second Cataract), and cleared the deposits of Typhon from the Ramasseums of Abu-Simbel (Ipsambul). The so-called Crystal Palace contains a caricature of these rock-temples; and country folk identify the Colossi with “Gog and Magog.”

In 1817 Belzoni, still under Salt, made his third run up-country, and attacked the famous Buban el-Muluk, the “Gates (i.e. tombs) of the Kings.” The hollow sound of a wall revealed an inner chamber, and the sinking of the ground, caused by rain, led to the Sepulchre of Sethi I. His description of crawling, snail-like, through the passages is admirable. The results of this work best known in England, are the Colossal head and arms sent to the British Museum; and the Sarco- phagus, of semi-transparent arragonite, afterwards (1824) sold by Salt to Sir John Soane for 2,000L. “Belzoni’s Tomb” preserves his name in Egypt; but I have noticed that of late years certain tourist-authors have forgotten the duty of rendering honour where honour is due.

During 1817–1818 Belzoni worked at the Troiei lapidis mort, vulgarly known as the “Second Pyramid.” He had some difficulty in persuading the Bedawin Fellahs of the west bank to assist him; but, as usual, he ended by succeeding. He cleared the upper of the two openings, and found that the Arabs had been before him. The inscription given by him (p. 275) and copied into every hand-book is, let me say, despite of Professor Lee and M. Salén, in part unintelligible. Perhaps Belzoni’s occupation is not gone. It appears to many that those vast sepulchral mansions must contain many chambers; and I ask myself why the pendulum and the new sound-instruments should not be scientifically tried.

In September, 1817, our explorer set out from Esse to visit Berenike (Trogoly etica). This Port of Ptolemy Lagi was the African terminus of the Indian “overland,” intended to turn the stormy and dangerous Gulf of Suez; and it held its own till supplant ed by Myos Hormos and other ports further north. The goods were disembarked, were carried by caravans through the Desert of the Thebais, to Coptos, Kopther, Caphtor (I), Koft, Kaf or Kibo on the Nile; and thence were floated down to Alexandria. The land journey was estimated at 258 Roman miles, and the march of twelve days gave an average of 21 per diem; our modern itineraries make the total 271 English statute miles. A similar western line was also taken, to escape the even more turbulent and perilous Gulf of Akahab; the road lying from Leuké Kome (el-Haurá) through the Land of Midian to Rhinocolura (el-Arif), on the Mediterranean.

At Berenike, following M. Caliud, and seeking for sulphur, Belzoni discovered a temple of Serapis; he explored the emerald mines of Jebel Zabibrah to the north-west, and the “Emerald Island,” or St John’s, which the Arabs call Semergah, or Semergid, from the Greek Smaragdos. Berenike has twice been visited by my friend General Purdy (Pasha), in 1871 and 1873. He found remains of mines about the Jebel el-Zaleghah (Zamarrut) with scorie, handmills, and other appurtenances of the craft, all along the road. Belzoni’s last trip (1819) was to Morris and “Elloah” (El-wah) el-Kasa, the smaller oasis, of which he is the discoverer. He was wrong, however, in identifying it with the “Wady” of Jupiter Ammon, which is Siwah.

After five years of splendid and profitable work in Egypt, Belzoni left it for ever (1819). In London he published his book, canvassed his friends, and prepared to carry out the dream of his life—a plunge into the then unexplored depths of the African continent. And here, leaving him for a time, we will return to Padua. Par parenthése, the “Chauvinismus” concerning stranger jealousy hardly applies to England: she was the explorer’s second mother; and his enemies were his own countrymen.

In 1866, when Padua exchanged the “Eagle with Two Heads displayed” for the plain Cross Argent of Savoy, sundry patriotic citizens addressed a petition to the municipality, praying that the name of the contrada be changed from the ignoble “dei Pacolotti” to the noble “Belzoni.” The request was disregarded, probably for the usual reason; it did not emanate from the fountain of all civic honour—the town-hall. The experiment is to be tried again, under circumstances which ought to, and which I hope will, ensure success. The Riviera (quay) Santa Sofia, formerly a fetid canal, one of the many veins of the Bacchiglione, has

---

* In 1822, John Murray, of Albemarle Street, published six “Plates illustrative of the Researches and Operations of G. Belzoni in Egypt,” &c. They are, 1. General View of the Site of Thebes. 2. The Mode in which the Colossal Head of Young Memnon was taken from Thebes. 3. India from the Ceiling of the Great Vailed Hall, in the Tomb supposed to be that of Pammis, at Thebes. 4 and 6. Ruins of Ombo, &c. 6. Interior of Temple in the Island of Philae.
just lost name and nature; the ground, a large oblong, will be planted with trees (Eucalyptus!), and it would start well in life under the honoured name of Piazzale Belzoni.

The necessary measures are being taken by Giovanni Dr. Tomasoni, of Udine, a man of property, who has travelled round the world. He holds, by-the-by, with Mennier (1874), against Gray (1875), that the Bonze in strange costume, short cloak and flat cap, who appears in the Buddhist temple of the “Five Hundred Genii” at Canton, is not Shien-Tchu, a Hindu saint, but a western man, and consequently Marco Polo.*

The first step will be to name the Square; the second, to raise a Monument. Something provisional might be set up, in the shape of a wooden pyramid, till subscriptions justify a formal statute. As this charge could not fairly be imposed on the municipality, an appeal should be made to public generosity. Padua has now many wealthy sons, and we may hope that they will practically disprove the imputation of materialism. Let us also hope that the statue will be realistic;—will show the explorer in working garb, not habituated like a Turk, a courier, or a Hercules.

II.
Belzoni in Benin.

Before landing the explorer on the edge of the Dark Continent, it is advisable to cast a short glance at Africa, in connection with England, during the first quarter of our century. The “African Association,” which became (1831) the “Royal Geographical Society,” was formed in June, 1788. It was founded by sending out Ledyard, one of the Cook’s circumnavigator, who was killed by fever in “Sennar,”—properly Si (water) n (of) and Arti (the Island)=Water Island. Followed Lucar; but this well-qualified traveller returned, re infecto, to the north coast. Next went the gallant Major Houghton, to be plundered and left to starve among the Arabs of Nubammar (Wali Omar) in the Great Desert (1791). Then came upon the stage that famous Mungo Park, whose charming volumes, I believe, owe most of their charm to Brian Edwards, of Jamaica. The Scotch surgeon’s first and ever memorable march was made in 1795-97, and the fatal second in 1805. Herr Hornmann, of Göttingen, set out from Cairo in 1798; became, it is supposed, a Marabout or Santon in Kashná; and disappeared about 1803. Rezot was murdered near Mogador in 1805. Adams, alias Benjamin Rose, assured the Association that in 1810 he had visited “Timbuctoo,” or, properly, Tim-bukhto, the “Well of Bukhita.” The same place was reached, in 1819, by James Rice, supercargo of the American brig Commodore, who brought back authentic details concerning the then mysterious course of the Niger. Captain Tuckey, R.N., commanding a Government expedition, lost himself and most of his companions by Congo fever and calomel, in 1816. During the same year, Major Peddie died at the beginning of his march on the Rio Nunez; and Major Campbell, his second in command, at Kakundu, in the next, June 13, 1817. Captain Gray (1818-19) returned safe from a trip to the Upper Gambia. Major Maing (1822-23) fixed the sources of the Niger, which he did not reach, in N. latitude 9°.* He was murdered during a second expedition in 1826, and evil reports, probably false, connected his death with the French explorer Caillié. The expedition of Ritchie and Lyon ended disastrously, by the death of its chief, in November, 1819. Lastly, Denham and Clapperton began their memorable exploration in 1820, and returned in January, 1825.

During this interval, Belzoni again presented himself before the British public. The reports concerning “Timbuctoo” had only whetted general curiosity; and the fictitious importance with which the march by “Long Desert,” and the “treachery of the Moors,” had invested that uninteresting place, lasted till the visit of my late friend Barth in 1853. The nineteenth century moves apace. In 1879 the French are proposing an impossible railway from Algiers to the ex-capital of Negroland;—the chief inducement being, evidently, to cut out les Anglais.

The Italian explorer had much in his favour. His gigantic strength was unimpaired; and he had recruited his health by three years of beefsteaks and beer. He had acquired the habit of command; and he was well acquainted with colloquial Arabic. His economies and the liberality of his friends supplied him with the sineuses of travel. The well-known Briggs Brothers, of London and Alexandria, lent him 200l. On the other hand his forty-five years were against him; Africa, like the persons alluded to by Byron, ever

Prefers a spouse whose age is short of thirty.

Belzoni began by visiting Tangier, where, foiled by the suspicions of the Moors and the Jews, he failed to reach Fez. He now changed his plans, and very sensibly made his will (May 20, 1823) before entering Central Africa, the “grave of Europeans.” He divided his property into three parts—the recipients being his mother, “Teresa Belzoni,” or “Belzoni,” another Theresa, the daughter of his deceased brother Antonio; and his wife Sarah. This done, he embarked at Mogador, touched at

* I propose to explore the sources in 1860-65; but the late Dr. Bukko agreed with me that le bon ne veut pas le chambler. My friend Wood Roebe was not successful in 1869. The head of the Juliba (“Great River”) has just been reached by MM. Tweifel and Monnier, employés in the house of M. Vernich, of Sivem Leone. They ascended the Rokoko, passed the Kong Mountains and Falsab town with some difficulty; and, guided by Major Maing’s map, found the main source on the frontier of Kasa and Kamarang, some 200 miles from the “Lion’s Range.” What was our “Royal Geographical Society” doing?

* Lecture of February 20, 1877. Mr. Archdeacon Gray’s Walks in the City of Canton was printed at Hong Kong. It supports the Hindu claims in pp. 207-8 and 217.
Cape Coast Castle, and landed in the Bight of Benin. He seems to have “divined” the Niger outlet. There were many “theoretical discoveries,” especially my friend the late James McQueen; but the question was not practically settled till Richard and John Lander dropped down the Nun, or direct stream, to the Atlantic mouth, in 1830.

“Benin,” or “Binnin,”—by the natives called “Ibin,” “Bini,” or “Ifin”—hold her head high amongst African kingdoms during the sixteenth and seventeenth centuries. In our age the name has fallen into disuse, and few know anything beyond the fact that she lies somewhere in West Africa. According to early explorers, the length (north to south) was 80 by 40 leagues of depth. John Barbot* increases these figures to 300 by 125, and makes the northern limit “Ardré,” now Dahoman, which he identifies with the classical Aroga mone on the South Ethiopic Ocean.

Benin was discovered by the Portuguese, of whom old Willem Bosman politely says, “They served for setting dogs to spring the game which was seized by others.” The explorer was Joao Afonso de Averio,† and the date 1485, one year after Diogo Cam had begun that conquest of the Congo which has lately been completed by Mr. Henry M. Stanley. Men were enthusiastic in those days. Fernan de Fio (Fernando Pó) called his trouvaille A Ilha Formosa (Fair Isle); and the Benin River became O Rio Formoso, or Formoso,—an older form,—but not Formosa, the feminine. In our times the British mariner sings,—with variants:—

The Bight of Benin! the Bight of Benin! One comes out where three goes in.

The natives know the stream-mouth as Uago ko Jakri, or “Outlet of Jakri,” the latter being African for the European Wari, Oware, Awerri, Ouerei, Owhyere, or Ovare, a petty principedom on the southern fork. The late Mr. Becroft, H. M.’s Consul for Fernando Pó, proved (1840) by a cruise in the Ethiops steamer that this Wari branch leaves the Niger a little below Abu or Ibu town. Consequently the Rio Formoso is the Western arm of the Delta, whose hypotenuse measures some 180 miles.

The “Missioner” soon took Benin in hand. Aveiro brought home a “Mou” (Ambassador) from the King, praying to be supplied with reverence men and ghostly meals. The Capuchin, Father Jeron Morolla da Sorrento,‡ tells us a pleasant story how Father Angelo Maria per-

suaded a “white young lady” of St. Thomas Island to a peculiar act of self-devotion. She travelled to Benin, and, “being arrived at the King’s palace, she was received by that monarch like another Rachel by Jacob, Esther by Abanatasur, or Artemisia by Mausolus, and afterwards married by him after the Christian fashion; thereby giving a good example to his subjects, who soon foresaw their former licentious principles and submitted to be restrained by the rules of the Gospel; that is, were all married according to the rites and ceremonies of the Church.” This much-suffering young woman sacrificed herself to very little purpose. During the seventeenth century Benin, like Congo, was overrun by a little army of “Apostolic Missioners;” who had, however, more care for their fees of slaves than for cures of souls: they meddled and they meddled, and they conducted themselves generally, to judge by their own accounts, in a way which would have secured deportation at the hands of downright Mr. John Dunn.

By slow degrees Christianity withered on its uncongenial soil. The Portuguese, who had begun work at Benin under D. Joao II., struck work under D. Joao III. During the latter part of the last century only a few half-caste traders and slavers from St. Thomas kept up churches and lodges at the chief settlements. In 1862 I found a trace of the faith in one place only, Wari- or Jakri-town; a tall cross still bore a bronze crown of thorns nailed to the centre, and a rude M(aria) I of the same material was fastened to the lower upright. Singularly strange and misEpisode was this emblem, rising from a grass thicket surrounded by a wall of the densest jungle, with a typical dead tree in front. Native huts here and there peeped over the bush; and hard by stood the usual Juju or fetish-house, a dwarf shed of tattered matting garnished with a curtain of white calico soiled and rusty. Truly a suggestive type of the difficulties with which the Cross had to contend in lands where Nature runs riot, and where the mind of man is rank as its surroundings:—

difficulties against which it has fought a good fight, but hitherto without the crown. Hard by the cross was a mound of solid earth, whose trend suggested that it was a place of sepulture. Of these revered men, these Nigerian martyrs, it may be truly said, “Time hath corroded their epitaphs and buried their very tombstones.” Not a sign of burial appeared save a bit of blanched and weathered skull. Yet they are not to be pitied. They laboureth through life at a labour of love, expecting the pleasing toil to end in eternal repose. And the good which they did lives after them;—at Wari I saw none of the abominations of Great Benin and Dahomey.

Upon the heels of the “Apostolic Missioner” came the merchant, who was mostly a slave-dealer. Now our eye-witnesses and authorities become Bosman and Barbot, who give copious accounts of the country and country folk. All the principal European nations, Portuguese, Dutch, English, and French, at one time had comptoirs; and all failed in consequence of the mosquitoes, the fever, and the utter rascality, the compli-
cated dishonesty, of the people, or rather peoples. The celebrated botanist (A. M. F. J.), Palisset de Beauvais, here passed upwards of a year (1786) in collecting materials for his Flore d'Ouare et de Benin. In 1788 Capitaine Landolphe founded near the river mouth for the Compagnie d'Ourbery a fort and factory which he called Borodo; this establishment lasted till 1792, and died of the Great Revolution. In these days a few English houses, Messrs. Horsfall, Harrison, Stewart and Douglas, and others, have settlements near the estuary, and take palm-nuts in barter for English goods. The export slave trade is totally stopped, to the manifest injury of the slave, who was once worth eighty dollars, and now hardly as many sixpences. Nothing, however, would be easier than to run a dozen cargoes of casimir noir out of the Benin river.

The ethnological peculiarity of Great Benin, as noted by all travellers, is the contrast between a comparative civilisation and an abominable barbarity. The capital which Bosman and Barbot call Oedo (Wedo) had in 1800 a circumference of six leagues; and of the thirty main streets some stretched two miles long and twenty feet wide. All were kept in a remarkable state of cleanliness,—a virtue little known to Europe in those days,—because "every woman sweeps her own door." At levees the prince sat upon an ivory couch under a silken canopy; and on his left hand, against a fine tapestry, stood "seven white soured elephant's teeth" on pedestals of the same material. The palace also contained large stables for horses; an article of luxury which has almost died out. The nobles bore the titles of Homongans (homons grandes) or grandees, and below them were the Mercadores and Fidadores (sureties or brokers). Yet the city was a Golgotha, an Acedama, and Barbot exclaims in the bitterness of his heart and nose:

The winds their sons and daughters they
Did offer up and slay;
Yes, with unkindly murdering knife
The guiltless blood they spilt;
Yes, their own sons' and daughters' blood
Without all cause of guilt.—PSALM IV. 35–38.

The "grand customs" on the death of a "King" were, and are, essentially different in detail from those of Dahomey. Yet the underlying idea is the same. Majesty must not enter Hades, Ghost-home, the Shadowy Land, without regal pomp and circumstance. The body is lowered into a deep pit; and the most beloved domestics of both sexes, who highly prize the honour, take their places above it. The mouth of the hollow is then closed with a large stone, and crowds of mourners sit around it all day. Next morning certain officers, told off for the purpose, open the pit and ask the set question, "Have ye found the king?" (i.e. in Deadman's-land). Those alive answer by telling how many of their number had perished of hunger and cold. This "strange-fantastical ceremony" is sometimes continued for five or six days. When at last no sound comes from below, the lieges make a great feast, and spend the night running about the streets, chopping off heads and dragging off the corpses, which are thrown into the pit before its final closing. Bosman, in the normal chapter on "Manners and Customs," notices the "ridiculous religion" and the frequent "apparition of ghosts of deceased ancestors,"—in fact, full-blown Spiritualism. But, like the men of his day, he never for a moment suspects that anything lies beneath the surface.

In May, 1838, Messrs. Moffat and Smith,* surgeons on board a merchant schooner, went to the city of Great Benin, wishing to open, or rather to re-open, trade. The latter, a "very promising young man," died of a dysentery caught by being drenched with rain. They were horrified to see a trench full of bodies at which the turkey-buzzards were tugging, and "two corpses in a sitting position." These victims had probably been despatched with a formal message, announcing the arrival of strangers to the King's father in Ghost-land. The same unpleasant spectacle was offered in August, 1862, when I visited Benin, accompanied by Lieutenant Stokes, of H.M.S. Blovodon, and Dr. Henry.† In the tall rank herbage, on the right of the path leading into the city, appeared the figure of a fine young man bare to the waist, with arms extended and wrists fastened to a scaffold framework of peeled wands, poles and stakes planted behind him. For a moment we thought that the wretch might be alive: a few steps convinced us of our mistake. He had been crucified after the African fashion, seated on a rough wooden stool, with a white calico cloth veiling the lower limbs. Between the ankles stood an uncouth image of yellow clay, concerning which the frightened natives who accompanied us would not speak. A rope of lianas, in negro-English called a "tie-tie," bound tight round the neck to a stake behind, had been the immediate cause of death. The features still showed strangulation, and the sacrifice was so fresh that, though the flies were there, the turkey-buzzards had not found the eyes. The blackness of the skin and the general appearance proved that the sufferer was a slave. No emotion whatever, save holding the nose, was shown by the crowds of Beninese, men and women, who passed by; nor was there any expression of astonishment when I returned to sketch the victim.

It is some comfort to think that the murder was committed with as much humanity as possible. These messengers to Ghost-land are always made to drink off a bottle of rum before the fatal cord is made fast. In one point, indeed, I found the Beninese superior to their neighbours. Twin births are esteemed good omens, not bestial and unnatural productions; and the mother receives a royal bounty like the happy parents of triplets and quartets in England. Beyond this nothing can be said in favour of Great Benin. The town has a fume of blood; it literally stinks of death. Without any prepossessions for "Humanitarian policy," and far from owning that Proselytism has succeeded, or ever will suc-

ceed, in this part of Africa, I could not but compare once more the difference between Abeokuta, where there are missionary establishments, and Benin, which for years has remained a fallow field. In the former, human sacrifice still flourishes; but it is exceptional, it is done sub rosa, and it does not shock public decency by exposing the remnants of humanity. In the latter it is a horror—touts "Fraser."

This unpleasent city was Belzoni's first objective. He had engaged a homeward bound sailor, a negroid from Káshá, who had served on board H.M.S. Owen Glendower, as his companion to "Timbuctoo," via Haussa. Thus he hoped to open a way through one of the most dangerous corners of the Dark Continent. A similar attempt was made in our day by the unfortunate Jules Gérard, the Chasseur (afterwards Tuer) du Lion. Whilst his relations live I hesitate to tell the true tale of his death.

Belzoni was not a general favourite in Egypt. He had placed himself in a false position, and he seemed to suffer under a chronic irritation and suspiciousness. He complained of "atrocious persecutions;" he found fortune "barbarous and unkind," and he left Egypt "prematurely," his plans being incomplete. In Africa it was otherwise. The skippers, supercargoes, and agents, popularly termed "Palm-oil lambs" (of the Nottingham breed), rough-mannered, kindly-hearted men, soon learned to love their guest as a friend. With affectionate adieux he took leave of them, was rowed up stream and landed at Gwato. Bosman calls this village "Agatton," he tells us that it ranked in importance after Boedoe (Obobi), and Arco, Arbon, Egro, New-town or Youngtown. "It was formerly a considerable place, but lately suffered much by the wars; it is situated on a small hill in the river; and it is a day's journey by land to the city of Great Benin." Barbot describes "Gotton" as a very large town, much more pleasant and healthy than its two rivals. The country is full of all sorts of fruit trees, and well furnished with several little villages, whose inhabitants go thither to the markets, which are held at Gotton for five days successively. He places it twelve leagues S.S.E. of the capital. Messrs. Mossat and Smith make "Gatto or Agatto" twenty miles to the S.W. (read S.S.W.). I have noticed "Gwato" at some length, as here Belzoni was fated to find a grave.†

The explorer was kindly received by Obá (King) Oddi or Odallá, father of Jábrá, alias Atolo, whom I visited. In 1862 many of the oldsters at Benin remembered the traveller; and talked admiringly of his huge black beard, his gigantic strength, and his mighty stature—six feet six. Everything was looking well, when the bad water of the city, taken from holes and polluted wells, brought on a dysentery, and the explorer was no longer young. In those days African fever was treated with the lanceet, which still names our leading Medical Journal. Dysentery had the benefit of calomel, opium, laudanum, and oleum ricini, the latter a poison in those lands. Here let me observe that the anti-diarhœa pill in the Crimean campaign was fully as fatal as the Russian bullet. When Nature is relieving the engorged liver, Art slips in and prevents the cure. Instead of meat-broths to support the strength, paps and gruels are given to sour the stomach; in fact the treatment was, and generally is, that best calculated to ensure fatal results.

Belzoni was too ill to take leave of the King, who sent him a kindly message. On the morning of November 28 (1823) he told Captain John Hodgson, of the brig Providence, who had run up to see him, that the hand of death was upon him. On December 2, with his usual good sense, he begged to be carried to Gwato and thence to "Bobbi" (Obobi), hoping much from the sea air. Mr. Hodgson in his ignorance unwillingly consented, and despatched him in a rough palanquin accompanied by Mr. Smith; he himself intended to rejoin the sufferer at Gwato, whence the vehicle was to be sent back. At the end of the march the disease seemed to take a favourable turn; and the explorer was well enough to eat some bread and drink a cup of tea. Before leaving Benin city he disposed of his belongings. He ordered all the objects worthy of a passage to be sent to England by the brig Castor of Liverpool. He wrote a few lines to Messrs. Briggs, and, being unable to hold a pen, he sent his ring to his wife, with an expression of lively affection and loving memory.

At 4 A.M. on the next day (December 3), the explorer awoke with swimming head, cold extremities, and eyes expressing delirium. He was strong enough to swallow a little arrowroot, but not to speak. At 2.45 P.M. he passed away, apparently without pain. Mr. Hodgson, reaching Gwato at 4 P.M., found that the body had been laid out by Mr. Smith. He went to the local Caboecer, or Governor, and obtained leave to bury his dead "at the foot of a very large tree" Under its broad foliage a grave was dug six feet deep, and at 9 P.M. the corpse was buried with all the honours. Mr. Hodgson read the funeral service, and his eighteen men, headed by himself and Mr. Smith, saluted with three salvos of musketry his guest's tomb. Sundry guns were fired by the vessels in port, the schooner Providence, the American Curlew, and the Castor. Mr. W. Fell, supercargo of the latter, caused his carpenter to prepare a tablet with an inscription noting the day of death, and expressing the pious hope that all European travellers who may visit the last home of the intrepid and enterprising traveller, will be pleased to clear the ground, and to repair the ring fence if necessary.

Such is the official and received account of the explorer's death. Local tradition declares that Belzoni was carried to the house of Ogéa, Caboecer (Governor) of Gwato. This man, described as a tall negroid of yellow complexion and uncanny look, died about 1850. He is said to have poisoned the traveller in hopes of plunder; and what lends weight to the charge is that he afterwards tried the same trick upon a European trader, and failed. The chief of Gwato, "Kusei,"—also, by the by, a noted vol. lxii.—no. 247.
poisoner,—popularly known as "the Parson" (here an old title, hereditary and connected with the local religion), declared to me, among others, that many of Belzoni's papers were handed over by Ogea to the royal vizier, or broker, and that since the latter's death they descended to his son. Stray leaves have been seen, according to European testimony, in the hands of the townspeople, leading to the conclusion that there are more behind. Mr. Sharpe, a late agent to Messrs. Hornefall, made a liberal bid for these documents; but without result. I was equally unfortunate, although I offered a bale of cloth—20l.

Belzoni's grave has been allowed, despite the epitaph, to drop out of sight. Staff Surgeon W. F. Daniell* described it as an "elevated mound of earth overrun with weeds, with the fragments of a decayed wooden cross." Messrs. Moffat and Smith found the "grave of the traveller Belzoni marked by a wooden tablet fast going to decay." In 1862, when I saw it, the place had become a tabula rasa.

The site of the sepulchre was pointed out to me near the Governor of Gwato's house, to the south-east of the village. "Belzoni's tree" is a fine spreading growth, which bears a poison apple, and whose boughs droop nearly to the ground. A little plantation of the Koko-yam (Colocasia) clothes the sides of the low mound from which the trunk springs, and a few huts and sheds stand between it and "the bush." It is a pretty and romantic spot.

I assembled the village ancients, and made a desultory attempt at digging under their vague and discordant directions. But time was short, a fight was brewing, and African growths cover double and treble the area of our largest English. I was obliged to content myself with sketching Belzoni's tree, with sending home a handful of wild flowers, and with expressing a hope that "some European passing by" would be more fortunate than myself.†

In 1865 I left Fernando Po, a locality famed for the rapid consumption of Europeans generally, and especially of English Consuls. Two of my successors have succumbed to the climate; and now there is a third applicant for the honourable, but ticklish, duty of representing the British Government. I can only hope that Mr. Consul E. H. Hewett will carry out a project of mine, foiled by circumstances; and will recover for the good city of Padua, which rejoices in the apocryphal relics of Antenor and of Livy, the mortal remains of her right worthy son Giovanni Battista Belzoni.

Studies in Kentish Chalk.

Nature lends no countenance to the dictum of Dr. Johnson that one green field is like another. Monotonous uniformity is not to be found in her least or greatest handiwork. While there are no hard and fast lines of demarcation between her geographical divisions, she has set certain broad marks of distinction upon their face which a little experience enables her students to note and recognise. It would scarcely be too much to affirm that the eye of a trained observer, at the first aspect of a new tract of country, can pronounce whether the soil be chalk, sand, or clay, what are its common native products, and what is the quality of the landscape in point of beauty. An expert in English chalk-scenery, at all events, may safely rely upon his powers of clairvoyance to distinguish its familiar features wherever he travels. There is no mistaking the indicia of that landscape when once thoroughly known. The gradual process by which such knowledge is acquired can no more be communicated than the pleasure which it brings. It is always true of Nature that

You must love her ere to you
She will seem worthy of your love.

All that can be done towards training another's eye is to throw out a few hints which may help it to observe for itself. No easier school for a novice can be suggested than the Kentish chalk-lands, and the following rough notes of their prevailing characteristics may serve, faute de mieux, as a skeleton chart for his guidance. The area is a large one, but the district more particularly referred to is its most picturesque section, with which the writer happens to be best acquainted.

A condition prevenient for the true enjoyment of a country such as this is that one should be an active walker. "The proud ones who in their coaches roll along the turnpike-road" can form but the most meagre idea of its variety and beauty. Even the horseman will be unable to penetrate many a recess specially haunted by its charm. It offers, however, no perilous pleasures to the mountaineer. Soundness of wind and limb, and a healthy contempt of dust or mud, according to the weather, are alone sufficient to qualify you as a walking tourist. At whatever season of the year you may take your first view of this landscape, the feature which will thrust itself upon your notice before all others is the uniform roundness of the outlines. The hills bear upon them the stamp of their aqueous origin. Gradually narrowing upwards from the base with a gentle acclivity, their slopes and crests are smooth; the former often vertically scored by the flow of water into deep central depressions,
